

Lexical Simplifier

- model
- pattern : str # format string
- exemplars : List[str]

- + __init__(model, pattern)
- + set_model(model)
- + set_pattern(pattern)
- + generate_substitutions_for(complex_word)

Benchmark Suite

- test_model : Lexical Simplifier
- languages : List[str] # This implicitly defines the datasets
- datasets : Dict { str : List [DataProvider] }

- + run() # Where to print/show report?
 - + clear_all_languages()
 - + add_language(language : str)
 - + add_languages(languages : List[str])
- Probably safer to use an enum

+ remove_language (lang : str)

+ disable_datasets (lang : str, datasets)

Datasets available are constant

+ disable_datasets (datasets : dict)
